THE SENTINEL

AUTOMATED TRAVEL SECURITY SERVICES AND RISK MITIGATION

Matching of geo-referenced booking data and GPS signals with country intelligence.

The software enables Risk Managers to locate persons who might be affected by an incident and to contact them with one click.

SOFTWARE AS A SERVICE - HOSTING & RECOVERY SITES

There is no specific infrastructure required on the client side. However, there are some minimum requirements on end devices of clients. The application requires a modern internet browser that is updated from time to time.

For the mobile app tracking solution, the end devices must run on iOS version 10 or newer. On Android, version 6 is the minimum requirement to assure stable operations.

SENTINEL SERVICE MODULES that are highly configurable

4	3	2	1	SECURITY PLATFORM <ul style="list-style-type: none"> ■ Country Intelligence – Country Reports and Alert Messages ■ Our customers can choose the provider and benefit from APIs with our preferred partners. ■ Upon request, content can be made available in 9 languages.
				SECURITY INFO SOLUTION <ul style="list-style-type: none"> ■ Subscription Self-Service
				GPS TRACKING SOLUTION <ul style="list-style-type: none"> ■ SPOTAP Mobile Security App ■ MESSENGER On-Trip Notification Service ■ Passenger Locator by various criteria ■ Passenger Contact Functions ■ Access to Monitoring and Reporting Functions ■ Company Places Management

FUNCTIONALITIES & CUSTOMER BENEFIT

Thanks to the independence of Traxess, the Sentinel is a cost efficient solution for managing travel security risks of multinational companies.

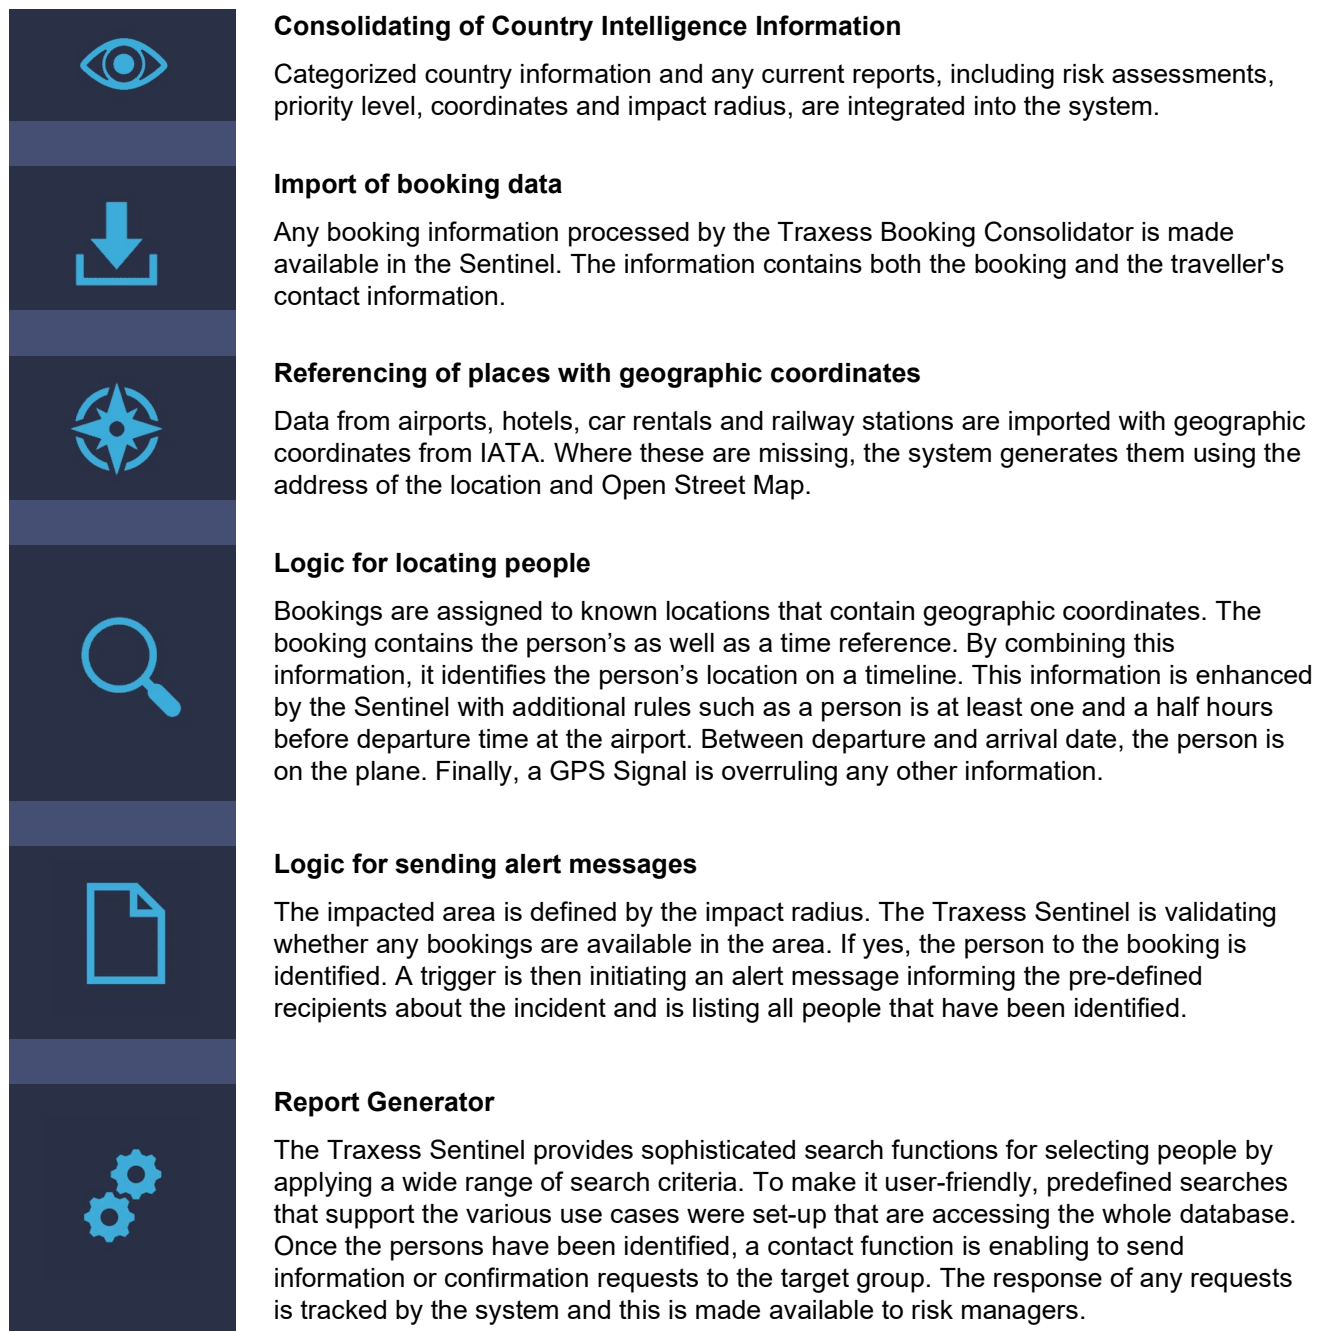

With Sentinel, customers remain flexibel in choosing TMC, the source of Country Intelligence or the Assistance Provider at any time.

	Booking Data <p>All travel bookings such as Flight and Hotel etc. including traveller profiles is provided to the Traxess Data Connector. This serves as basis for duty of care services.</p>		Locating clients <p>The client's location is accessible at any time and by running a report with use case specific criteria, a group of people can be identified for taking further actions.</p>
	Georeferencing <p>Coordinates are either received from the mobile device that is sending GPS Signals, from IATA or generated by the Sentinel from the address of a location.</p>		Contacting clients <p>Located clients can be contacted by sending case specific messages as bulk notifications via email, SMS or with Text-To-Speech Messages.</p>
	Country Information <p>The information chosen by clients are continuously updated and stored in the database. The information is parameterized and categorized in segments. In addition, the information contains a risk rating that is triggering services.</p>		Receipt Confirmations from clients <p>After locating one or a group of clients, risk managers can choose from several templates which is steering the type of requested response that is monitored.</p>
	News Messages <p>The latest news is imported in real-time. The information is categorized, contains a risk assessment including risk level, impact radius of the incident and finally, coordinates. The impact radius serves for identifying clients that might be affected while others are applied for filtering notifications.</p>		Access to Security News <p>Risk managers can access to the latest security news that are provided by risk management experts. Based on this news, recommendations can be provided to clients to promote appropriate behaviour.</p>
	Locating and contacting clients <p>The Sentinel provides various reports that help risk managers to locate or contact clients with a few clicks. By sending a request, risk manager obtains client's status. An alert function is available that notifies the risk manager if a client is in danger.</p>		Alert Function <p>The Traxess Sentinel is providing a service to alert predefined recipients if any person is in the impact radius of an incident.</p>

HOW THE TRAXESS SENTINEL WORKS

The software is combining data from various source systems with country intelligence stored on our servers, to make it available to managers via web interface.
